Nyavhas M Poultry Farm Website

WEDE5020 - POE Part 3

1. Project Overview

Nyavhas M Poultry Farm is a small poultry business established in 2022 in Thononda Village, Limpopo. I developed this website to help customers learn more about the farm, view its products and contact the business.

The website was created using HTML, CSS and JavaScript.

2. Improvements from Part 2 to Part 3

In Part 2 I focused mainly on creating the website pages and designing them using HTML and CSS. In Part 3 I improved the website by adding more functionality and making it easier for customers to use.

The main improvements include:

- **JavaScript -** Added interactive features to improve the website's functionality.
- **Form validation -** Improved the contact and enquiry forms by checking required fields, email addresses and phone numbers.
- **Error messages -** Added messages to help users correct missing or incorrect information.
- **Website design -** Improved the colours, buttons, forms and footer while keeping the farm's green and gold theme.
- **Responsive design-** Improved the layout so the website can be viewed on computers, tablets and mobile phones.
- **Interactive map -** Used Leaflet to show the areas served by the farm, including Thononda, Tshiheni, Tshithuthuni, Tshiendelu, Mazwimba and Maname.
- **Image gallery -**Improved the product gallery and added a lightbox to view larger images.
- **SEO -** Added or improved page titles, meta descriptions and other search engine information.
- **Deployment -** Prepared the website for publishing online using Netlify or GitHub Pages.

3. Technologies Used

- HTML5 for the website structure.
- CSS3 for styling and responsive design.

- JavaScript for interactivity and form validation.
- Leaflet for the interactive map.
- Visual Studio Code for writing and editing code.
- GitHub for storing and managing the project.
- Netlify for website hosting.

4. Website Pages

- index.html - Home page.
- about.html - Information about the farm.
- products.html - Poultry products and images.
- enquiry.html - Product enquiry form.
- contact.html - Contact information, map and contact form.
- style.css - Website styling.
- script.js - JavaScript functionality.
- image - Logo and website images.

5. Testing

Before submitting my project, I need to check that:

- All pages and navigation links work.
- Images and the farm logo display correctly.
- Contact and enquiry form validation works.
- Error messages appear when required information is missing.
- The map, image gallery and lightbox work correctly.
- The website displays properly on mobile devices.
- The published website link opens successfully.

6. Changelog

In Part 3, I worked on the following improvements:

- Improved the website created in Part 2.
- Added or improved JavaScript functionality.
- Improved form validation and error messages.

- Updated the website styling and footer.
- Improved mobile responsiveness.
- Added an interactive map and service-area markers.
- Improved the product image gallery.
- Updated SEO information.
- Prepared the website for online deployment.
- Updated the project documentation.

7. Conclusion

Part 3 helped me improve my website by adding functionality and making it easier to use. I improved the forms, website design, map, image gallery and responsive layout. These changes aim to help customers find information about Nyavhas M Poultry Farm and contact the business more easily.
