website Project Proposal

1.**Organisation Overview:**

- Name: [Nyavhas M Poultry]
    - Provide a brief history of the organisation.

Nyavhes M Poultry Farm is a small business established in 2022 in Thononda Village, Limpopo, South Africa with the aim of supplying affordable, high quality poultry products to the local community. The business starts as a home based farming project with a limited number of chickens and continues to increase to consist of two sections focused to poultry. While the other portion raises broiler chickens for meat production, the first area concentrates on producing eggs.

The farm supplies fresh eggs, live chickens and cleaned ready to cook chicken to households, local seller and small businesses. Through consistent product quality and reliable customer service, the business has developed a loyal customer within Thononda Village and neighbouring communities.

With consistent growth, the business now largely depends on direct customer visits and word of mouth promotion. It does not yet have an official website where customers can learn about available products, enquire about prices or contact the owner online. Developing a professional website will improve the farm's online presence, increase customer engagement and make it easier for new and existing customers to access information.

Mission

Nyavhes M Poultry Farm is loyal to providing fresh, affordable and high quality poultry products while supporting local food security and delivering excellent customer service to surrounding communities.

Vision

To become one of the leading trusted poultry suppliers in Limpopo by expanding production, adopting digital technology and building long term relationships with customers through quality products and reliable service.

- Target audience.

  - households within Thononda Village

  - Residents of nearby villages such as Tshiheni, Tshithuthuni, Tshiendelu, Mazwimba and Maname.

  - Local street seller.

  - Elderly residents and SASSA beneficiaries seeking affordable food.

  - individuals looking to purchase fresh eggs or chicken in bulk

2. **Website Goals and Objectives:**

   - Define specific goals for the website (e.g., increase website traffic, generate leads, sell products, or provide valuable information).

     -Establish a professional online presence.
     -Increase awareness of the farm and its products.
     - Showcase poultry products with clear descriptions.
     - Provide customers with an online enquiry form.
     -Improve communication between the business and customers.
     -Support future online marketing initiatives.
     - Optimise the website for search engines to improve visibility.

   - Determine and present key performance indicators (KPIs) to measure success.

     - Increase website traffic by attracting at least 500 visitors per month.
     - Receive a minimum of 30 customer enquiries each month through the website.
     - Achieve an average visitor session of more than two minutes.
     - Improve visibility in local online searches for poultry products.
     - Increase customer engagement through product page visits and contact form submissions.

3. **Current Website Analysis (if applicable):**

Nyavhas M Poultry Farm currently has no official website and relies mainly on word-of-mouth marketing and direct customer communication. While this has helped build trust within the local community, it limits the business's ability to reach new customers and promote its products more effectively.

The absence of a website means customers cannot access information about products, prices, operating hours or contact details at their convenience. Creating a professional website will address these challenges by providing a central platform where customers can obtain accurate information and communicate with the business.

The proposed website will strengthen the farm's digital presence, improve customer service and support future business growth.

- Identify areas for improvement based on the weaknesses identified.

-Develop a professional, responsive website accessible on desktop and mobile devices.

-Create dedicated pages for the Home, About Us, Products, Enquiry and Contact sections.

-Include high-quality images of poultry products to increase customer interest.

-Implement an online enquiry form with client-side validation using JavaScript.

-Integrate Google Maps to help customers locate the business.

4. Proposed Website Features and Functionality:

The proposed website for Nyavhas M Poultry Farm will provide customers with a professional and user-friendly platform where they can learn about the business, browse products and contact the farm. The website will consist of five main pages that are connected through a consistent navigation menu.

Homepage (index.html)

The homepage will welcome visitors to the website and provide a brief introduction to the farm. It will include a hero image, a welcome message, featured products and quick navigation links to other pages.

About Us (about.html**)**

This page will provide information about the history of the farm, its mission, vision and core values. It will also explain the farm's commitment to providing fresh, affordable and high-quality poultry products.

Products (products.html)

The products page will showcase the farm's products, including fresh eggs, live chickens and cleaned ready to cook chicken. Each product will include a description and an image to help customers understand what is available.

Enquiry (enquiry.html)

The enquiry page will contain an HTML form where customers can submit product enquiries. The form will collect information such as the customer's name, email address, telephone number, selected product, message additional and quantity required

Contact (contact.html)

The contact page will display the farm's contact details, operating hours and business locations. A contact form will also allow visitors to send messages directly to the business. In Part 3 of the project, Google Maps will be embedded on this page.

Website Functionality

The website will include the following functionality:

-Easy to use navigation menu on every page.

-Responsive page structure for desktop, tablet and mobile devices.

-Contact and enquiry forms.

-Product information with images.

-Footer containing copyright information.

-Search Engine Optimisation (SEO) features in Part 3.

-JavaScript form validation and interactive elements in Part 3.

5. **Design and User Experience:**

- Discuss the overall design aesthetic and branding, highlighting the following:

  The website will use a clean, modern and professional design inspired by agriculture. The design will use high-quality poultry and farm images to communicate freshness and build customer trust.

  The layout will be simple and uncluttered so that visitors can easily locate products, business information and contact details.

  Consistent branding will be maintained throughout all pages by using the same colour scheme, typography, navigation structure and footer.

- Colour Scheme:

  Navigation, heading and footer= Dark Green
  Main backgrounds=blanchedamond
  Dark Grey = body text
  Light green= highlights and section

- Typography: [body text Arial and hierarchy h1:36px, h2: 28px, h3:22px; body text 16px and 18px for navigation]
- Layout and Design: [header, Navigation, Main content, images, footer]

  . Header
  . Navigation menu
  . Main content
  . images and information sections
  . footer

- User experience considerations (e.g., navigation, layout, colour scheme).

  Simple navigation.
  Clear headings.

Readable text.

Consistent page layouts.

Appropriate image alternative text.

Clear forms.

Easy access to contact information.

Mobile-friendly design.

Clear calls to action.

- Develop low-fidelity wireframes to visualise the website's layout and information hierarchy.

Wireframes

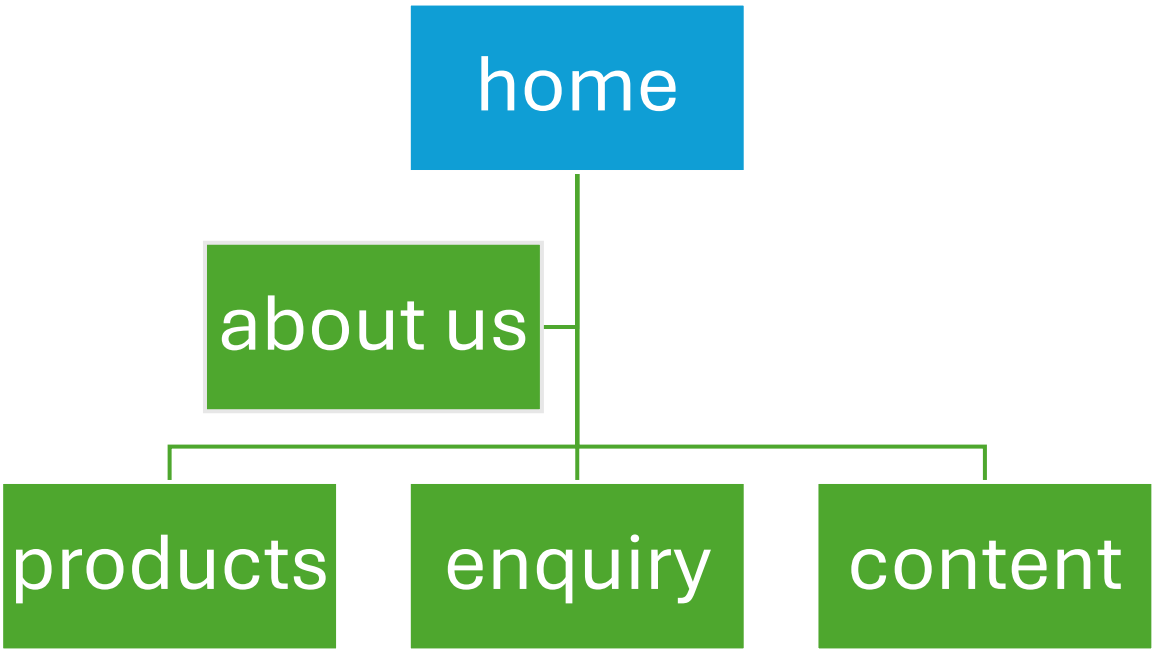

-index.html

-about us.html

-products.html

-Enquiry

-content

6. **Technical Requirements:**

Visual Studio Code

GitHub

HTML

will be used to create the structure and content of the website. The initial Part 1 website will consist of five HTML pages.

Css will be for part 2

Js will be for part 3

7. **Timeline and Milestones:**

- Create a realistic project timeline with key milestones that follow the timeline during the subject's submission dates.

  Week 1- research organisation and target audience; completed

  Week 2- develop one project proposals; completed

  Week 3- obtain organisation approval and finalise project; done

  Week 4- develop site and file structure; completed

  Week 5- develop five HTML page

  Day 1- index HTML

  Day 2- about us

  Day 3-prodect

  Day 4 will be doing enquiry and content

  Day 5 test navigation and HTML structure

8. **Budget:**

- Estimate the budget for development, hosting, and maintenance (while this is a series of assignments, the budget should reflect realistic amounts based on your research).

  - Domain registration = R250
  - Web hosting = R1,200
  - Website development = R12,000
  - Logo and branding = R1,500
  - Photography and image preparation = R2,000
  - Website maintenance = R3,000
  - SEO setup and optimisation = R2,500
  - Testing and quality assurance = R1,500
  - Contingency = R2,050
  - Estimated Total= R26,000

9. **References:**

- References listed here are unique to the chosen organisation and the researched documentation of the Website Project Proposal. The references listed in this document and the general references used to complete Part 1 will be compiled in the README.md document in the repository for the entire PoE.
